

Name: Canine Species (Khanfora) Ref. by: Dr. Paws Hospital
Date: June 14th 2020 Age: 5 Years
Breed: Pug Owner: Ms. Nevien

Female Hormone Profile

Parameter	Result	Reference range and interpretation
Progesterone	1.03 ng/ml	<i>Progesterone levels should be tested every two to three days once the dog is three to five days into heat. Progesterone levels are usually less than 1.0 ng/ml before the LH spike, rising to 3 to 4 ng/ml the day following the LH spike. When the progesterone level rises to 5 ng/ml, ovulation occurs</i>
